Jeff,
We are getting press inquiries regarding the Storis. Could you please call my cell when you get a chance. Specifically, I need to know if the Nov 2000 sampling report (attached) was the only sampling conducted for PCBs. I also need to know if any remediation was done on the areas that tested above 50 ppm. Finally, I need to know what is meant by the sentence "Please be advised that the CGC Storis is free of PCBs. All material that is above 50ppm and not defined as totally enclosed are considered PCB containing for regulatory purposes." (on the first page of the attached) -- Any PCBs greater than or equal to 50 ppm are illegal to export for disposal regardless of being totally enclosed or not.

Thanks,
Bill
